Safety information

Shaver heads, foils and cutters

Read before use and keep these instructions.

> Switch off the device, disconnect external power and prevent automatic or remote starting before replacement. Let moving parts stop. Isolate batteries or other energy sources as the device manufacturer directs; do not dismantle a built-in battery. Replace only user-serviceable parts. Internal electrical or structural repairs belong to a qualified service provider.

Purpose and personal hygiene

Use YIVO replacement shaving heads, foils, cutters and holders only with the specified full shaver model and attachment system. Read and keep these instructions. If the part does not fit or instructions conflict, stop fitting it and contact YIVO; never force it. One head and its cutters must be used by one person only, even after ordinary cleaning or rinsing. Sharing can transfer dirt and microorganisms, including through traces of blood from small cuts. Rinsing is not sterilisation.

Inspection before every use

Inspect the foil, cutters, housing and fastenings before every use, after cleaning and refitting, and after a fall. Do not use a perforated, cracked, dented, lifted or detached foil, exposed cutter, damaged latch, or loose or missing parts. Do not test the foil by pressing it with a finger. WARNING: a damaged foil or incorrectly fitted head can expose cutting parts and cause cuts. Do not switch on a damaged head, even for a test; do not glue, straighten or push a detached foil back into place. Stop using it and contact YIVO.

Fitting and use

Switch off, disconnect the charger and wait for the cutters to stop before removal, fitting or cleaning. Handle only user-serviceable parts and hold the housing, not the foil. Position the part correctly, close all locks and check seating. Keep matched rotary cutter-and-guard pairs together where the design requires this. Do not press excessively or shave damaged or irritated skin: excessive pressure can cause irritation. Do not compensate for poor shaving by pressing harder. Stop immediately if there is pulling, pain, a cut, unusual heat, noise or vibration; inspect the condition and cleanliness of the head.

Cleaning after every use

All YIVO shaving heads can be washed under running water. After every use, switch off, disconnect charging, wait for the cutters to stop, remove the head and rinse it under lukewarm running water to remove hair and cosmetic residue. Build-up can obstruct the cutters and reduce shaving performance. Never prise open a non-disassemblable cassette or lift the foil. If rinsing does not clear the dirt or the head still works abnormally, stop and contact YIVO. A washable head does not mean that the whole shaver or charger is washable: protect contacts and electrical parts according to the appliance instructions.

Protecting the foil and drying completely

Never puncture, deform, scrub or brush the foil, or wipe it with a towel, paper or cloth. Pressure and rubbing can damage it and increase the risk of cuts during subsequent shaving. Do not use compressed air. Leave the head to dry naturally and completely in a ventilated place. You may support it securely on its housing on a fresh, lint-free paper towel used solely as a base; do not rest it on the foil, wrap it or wipe it. Do not use a hairdryer, radiator or other direct heat. Use only after complete drying. Do not seal a damp head in packaging. Store clean and dry, protecting the foil from crushing. Do not use solvents, bleach or abrasives. Use oil, disinfectant or a cleaning station only where compatibility is confirmed and follow the relevant usage instructions.

Do not use automatic cleaning stations or fluids intended for those stations unless YIVO has expressly confirmed that the product is compatible with that cleaning method. A head being washable under running water does not establish compatibility with a cleaning station fluid or operating cycle.

Damage and reporting a problem

Replace worn or damaged parts and do not resume use until abnormal symptoms have been resolved. Keep small and sharp parts and packaging away from children and animals. Protect used cutting edges during disposal in accordance with local rules. After a safety incident, switch off and prevent restarting; retain the damaged head and packaging for assessment without further cleaning, dismantling or repair. Report the product, shaver model and incident to YIVO. An order number and photos help identification. Seek emergency assistance if health or life is in immediate danger. These instructions do not restrict statutory rights against the seller; any commercial guarantee is additional.
